DESCRIPTION
Biological engineering increases understanding of how biological systems function as both physical and chemical mechanisms; how they respond when perturbed by factors such as medical therapeutics, environmental agents, and genetic variation; and how to manipulate and construct them toward beneficial use. Biological engineering builds on molecular biology and genomic biology to identify and manipulate the mechanistic components of living systems and to accelerate the rate of analysis.

INSIDE COURSE 20

20 Biological Engineering Undergraduates: 170

INTRODUCTORY CLASSES

SP.247 Exploring Majors at the Intersection of Engineering, Life Sciences, and Medicine (SPRING and IAP)
Interactive introduction to the several majors at MIT that offer curricula bridging engineering and life sciences, through presentations by faculty, current students, and alumni. Representatives of these departments (Courses 1, 2, 3, 5, 6, 6-7, 7, 9, 10, and 20, as well as the BME minor) cover aptitudes of typical students, culture, class offerings and roadmaps, and unique opportunities. Provides first-year students practical advice about how to select, prepare for and thrive in each major. Students taking 3-unit version of SP.247 complete reflection papers outside of class. Subject can count toward the 6-unit discovery-focused credit limit for first year students.

20.010 Introduction to Experimentation in BE
Teaches students to ask research questions and use the steps in the experimental method to test hypotheses. Introduces best practices in basic data analysis and interpretation. Additional topics include exploring experimental failures, unexpected results, and troubleshooting. Goal is to prepare students for undergraduate research opportunities and laboratory-based coursework. This is a discussion-based subject and is dependent on group participation. Preference to first- and second-year students.

20.110 Thermodynamics of Biomolecular Systems
COURSE 20-FRIENDLY RESEARCH AREAS/ LABS
Koch Institute for Integrated Cancer Research
Health Sciences and Technology (HST)
Broad Institute
MIT Synthetic Biology Center

GET INVOLVED WITH COURSE 20
Biological Engineering HST Student Community
Undergraduate Student Board Pre-Medical Society
Biotechnology Group The BioMakers Group
GlobeMed Undergraduate Biochemistry Association
Hacking Medicine

SKILLS
Prepare project plans for equipment or facility improvements (project management)
Adapt or design computer hardware or software for medical science uses
Lead studies to examine or recommend changes in process sequences or protocols.
Research new materials to be used for products, such as implanted artificial organs

POSSIBLE FUTURE POSITIONS
- **Research and development engineer**: Develop new products and improve existing products for groundbreaking medical device equipment.
- **Regulatory affairs specialist**: Coordinate and document internal regulatory processes, such as internal audits, inspections, license renewals, or registrations. Prepare submissions and obtain approval for products and therapies to markets worldwide.
- **Bioprocessing/food engineer**: Integrate biology and engineering to design sustainable systems that produce high quality food, renewable energy, and biomaterials for consumers while protecting the environment.

CAREER INDUSTRY EXAMPLES
Environmental engineering Materials Handling Pharmaceuticals
Government Medicine Research
Management Medical Technology Zoology

SAMPLE EMPLOYERS
AthenaHealth CRISPR Therapeutics Motif FoodWorks
Biogen Diagnostic Biochips NIH
Broad Institute Illumina Vertex
